

## Coronavirus Statistics in the US

### Description

[XRGRSF](#) says:

I ran the numbers this morning, and the U\$, even with what's laughingly described as the best medical care in the world, has 30% of the world's CV-19 cases, and 28% of the world's CV-19 deaths. Since the U\$ only has about 6% of the world's population either the U\$ is very unhealthy or someone is cooking the books.
