

Debt? What Debt?

Description

US National debt increased by nearly \$1 trillion in the last month

In the past 30 days, the United States national debt has increased by nearly \$1 trillion— screaming past \$26.2 trillion total, or 128% of GDP.

That means the US government is borrowing over \$23 million per MINUTE.

But that's just the last 30 days. The US government has gone nearly \$3 trillion further into debt since March 1.

That is over \$9,000 for every man, woman, and child living in the United States. And all you received was a \$1200 check...

Now the "Save our Country Coalition" has penned a letter to Congress stating that the federal budget is dangerously close to **\$10 trillion** this fiscal year.

On an inflation adjusted basis, that means the government will spend more fighting Covid than it spent fighting every single 20th century war— plus the 21st century Wars in Iraq and Afghanistan— COMBINED.

The cost of World War I, World War II, The Korean War, The Vietnam War, The Gulf War, The Iraq War, and the War in Afghanistan combined, does not add up to this fiscal year's budget.
