

Questions about the COVID-19 Agenda

Description

John Wear asks:

The following are some questions concerning the Covid-19 pandemic:

If the masks work—Why the six feet?

If the six feet works—Why the masks?

If both of the above work—Why the lockdowns?

If all three of the above work—Why the vaccine?

If the vaccine is safe—Why protect it with a no liability clause?

If the vaccine is safe—Why not test it on animals first before using it on humans?

If the vaccine is safe—Why did Tiffany Dover, a healthy 30-year-old nurse, faint 17 minutes after receiving the vaccine? Is Tiffany Dover dead? Why are so many other people having adverse reactions and dying from the vaccine?

If successful vaccines have never been developed for other coronaviruses—Why should we expect a successful vaccine for this coronavirus?

If SARS-CoV-2 exists—Why has it never been isolated?

If SARS-CoV-2 has never been isolated—How can an effective vaccine be developed?

If the RT-PCR test works—Why so many false positives?

If Kary Mullis, the inventor of the RT-PCR test who conveniently died in August 2019, said his test shouldn't be used to diagnose infectious diseases—Why use it to detect SARS-CoV-2?

If there is an epidemic—Why so many empty hospitals?

If large numbers of people are dying from SARS-CoV-2—Why so many fake causes of death on the death certificates? Are flu deaths being recharacterized as COVID-19 deaths?

If SARS-CoV-2 exists—Why give doctors financial incentives to diagnose SARS-CoV-2?

If the official COVID-19 narrative is defensible—Why censor people who dispute this narrative?
