The CDC has done another data dump today into the Vaccine Adverse Event Reporting System (VAERS), a [U.S. Government funded database](#) that tracks injuries and deaths caused by vaccines.

The data goes through February 12, 2021, with [15,923 recorded adverse events](#), including [929 deaths](#) following injections of the experimental COVID mRNA shots by Pfizer and Moderna.

From the 2/12/2021 release of VAERS data:

Found 15,923 cases where Vaccine is COVID19

Table		
Event Outcome	Count	Percent
Death	929	5.8
Permanent Disability	316	1.9
Emergency Visit	2,190	13.7
Emergency Room	21	0.1
Emergency Doctor/Room	3,430	21.5
Hospitalized	1,869	11.7
Overdosed	5,709	35.8
In Defect	25	0.1
Threatening	616	3.9
Serious	5,661	35.5
TOTAL	↑ 20,766	↑ 130.2

Because some cases have multiple vaccinations and symptoms, a single case can account for multiple entries in this table. This is the reason the Total Count is greater than 15,923 (the number of cases found), and the Total Percentage is greater than 100.

Besides the recorded 929 deaths, there were 3451 visits to Emergency Room doctors, 316 permanent disabilities, and 1869 hospitalizations.
