
There is No Flu and No Covid; It's the Old Pneumonia!

Description

by **Brian Shilhavy** via [Health Impactn News](#)

The flu bug is dead! It had a long run of success at the CDC, being used to rake in \$BILLIONS in sales over the years with the yearly influenza vaccine, but alas its run is over now, as it has been supplanted by the new deadlier “virus,” COVID-19 (\$20 billion in 2022 alone).

Oh make no mistake about it, the CDC tried to keep both viruses alive to have double the fear factor, and double the sales in vaccines, but in the end there just weren't enough sick people to go around and support both with actual death statistics.

So the flu died. COVID-19 is way more scary than the annual flu, so one of them had to go, and people were just too used to the annual flu and were [not fearing it as much anymore](#).

And if you think I am using sarcasm here to make a point, then go listen to Anthony Fauci say the **exact same thing** back in 2019 when he stated people did not fear the flu enough anymore, and that something new was needed, and hear it directly from his own mouth:

[**BOMBSHELL: Video Emerges Where Fauci and Others Planned for a “Universal mRNA Flu Vaccine” Which Became the “COVID-19 mRNA Vaccine” Because People were not Afraid Enough of the Flu Virus**](#)

But everything is OK if you are invested in pharmaceutical stocks, because with the Federal Reserve banks creating money out of thin air and then having their puppet politicians give \$TRILLIONS to the pharmaceutical industry, there was plenty of money to go around for other vaccines besides COVID, and annual sales of the flu vaccine skyrocketed to its highest total ever in the 2020-21 flu season, at 193.8 MILLION doses, the same year the COVID-19 vaccines were introduced.

Talk about a windfall for Big Pharma, wow!

While they were raking in record profits from the COVID-19 shots, they also profited from the most doses of the flu vaccine ever sold, for a “disease” that basically doesn't even exist anymore, according to the CDC's own statistics.

Welcome to the Pharmaceutical Drug Cartel, and their criminal front group, the CDC.

Here is what the CDC's official statistics are reporting for annual flu deaths since 2020, as of today, March 9, 2022:

Table 1. Deaths involving coronavirus disease 2019 (COVID-19), pneumonia, and influenza reported to NCHS by time-period and jurisdiction of occurrence.							Data as of: 3/9/2022	
State United States						Year All		
Year in which death occurred	All Deaths involving COVID-19 [1]	Deaths from All Causes	Percent of Expected Deaths [2]	Deaths involving Pneumonia [3]	Deaths involving COVID-19 and Pneumonia [3]	All Deaths involving Influenza [4]	Deaths involving Pneumonia, Influenza, or COVID-19 [5]	
2022	111,086	538,218	19	79,411	57,640	676	133,399	
2021	460,537	3,449,912	121	409,224	258,421	1,071	612,144	
2020	385,475	3,389,094	119	351,890	179,997	8,785	565,002	
Total	957,098	7,377,224		840,525	496,058	10,532	1,310,545

As you can clearly see, the CDC’s own data is showing that the flu is all but disappearing as a cause of death, and is down to only 676 alleged deaths in 2022. I doubt that the flu even makes the top 100 list of diseases causing death now.

How many people allegedly died from the flu in the years prior to 2020 when COVID was unleashed?

[According to the CDC:](#)

- 34,000 deaths in the 2018-2019 flu season
- 61,000 deaths in the 2017-2018 flu season
- 38,000 deaths in the 2016-2017 flu season
- 23,000 deaths in the 2015-2016 flu season
- 51,000 deaths in the 2014-2015 flu season
- etc. ([Source](#).)

According to the CDC’s own currently published data, therefore, deaths caused by the flu plummeted to the lowest numbers on record starting in 2020.

[. . .]

Dr. David Brownstein is a doctor who regularly exposed this scam, although [the government has now stepped in and censored his writings](#) scrubbing his blog clean, but we have preserved many of his articles on this topic.

In October of 2018, [he wrote](#):

The Centers for Disease Control and Prevention estimated that the 2017-2018 flu season killed 80,000 and hospitalized 900,000 Americans. Of course, the mainstream media reported this as fact as shown in this September 27, 2018 article in the Washington Post.

The Powers-That-Be, including the CDC and the mainstream media, are using these estimates to promote the flu shot for the upcoming flu season.

Keep in mind, the 80,000 deaths and 900,000 hospitalizations are ESTIMATES. And, I can

state, with authority, that they are very poor estimates.

You see, deaths from flu are always estimates because if the Powers-That-Be reported the true numbers of deaths from actual influenza infections, the numbers would be much lower and people would not be so inclined to receive a flu shot.

How does the CDC overestimate the number of flu deaths? The CDC accomplishes this by reporting a combined pneumonia and influenza death rate. Every time I try to analyze this data, I know I will have to spend at least an hour searching for the true number who died from influenza because the CDC tries to hide that data.

Why does the CDC do this? The answer is easy: The more people that receive the flu vaccine, the more money the CDC makes. You see, the CDC holds patents on many vaccines including the flu vaccine. (1)

Perhaps I could tolerate the CDC combining pneumonia with flu deaths **IF** the flu vaccine prevented both. However, the flu vaccine has never been shown to have any impact on the number of deaths from pneumonia.

In fact, for the vast majority who receive it, the flu vaccine has little impact on preventing the flu, but I digress.

In 2001 the CDC reported that 62,034 died from influenza and pneumonia. That year, I would bet that CDC proclaimed that flu killed over 50,000 Americans. After a painful hour of searching the CDC's database, I found the true 2001 numbers: 257 died from influenza and 61,777 died from pneumonia. Keep in mind, any death from the flu is tragic, but those numbers are out of a population of over 300 million. In 2010 (the latest year data are available) there were 55,227 deaths due to pneumonia and flu. Flu killed 4,605 while pneumonia killed the rest. (2)

So, let's go back to last year's flu season. The flu season lasts about six months. 80,000 deaths would lead one to conclude that 13,333 died per month (80,000/6 months) from the flu. If we further divide that number by 50 (the number of states), we can conclude that there were 267 people dying each month in every state from the flu. Since the internet provides 24-hour news cycles, I think we all would have heard that about 9 people (267/30 days per month) in every state dying daily from the flu. (3)

I have five practitioners in my office. We have over 100 years of experience in treating patients. None of us has can recall a single patient dying from the flu.

In fact, I can guarantee you that if 9 people were dying in my state **daily** from the flu, my partners and I would hear about it. In fact, there are always headlines on the internet when one person dies from the flu.

Studying the past CDC data shows that each year a few hundred to a few thousand die from the flu.

80,000 died last year? I say, "Fake News!" ([Source.](#))

Dr. David Brownstein was attacked by the FTC in 2020 because he dared to heal his patients testing positive for COVID with non-pharmaceutical products such as Vitamin C. He was opposed to a COVID-19 vaccine.

They silenced him.
