

All Western Capitals Within the Range: That's the Greatest Fear

Description

via Turkey's [Yenisafak](#)

Colonel General Sergey Karakaev, the commander of Russia's strategic missile forces, announced at a military conference yesterday that Russia has recently successfully tested the Sarmat missile, also known as the Devil II (Satan II).

In his statement, Karakaev also announced that the Russian forces are ready to receive the second set of Avangard hypersonic missiles.

PUTIN GIVES 'IMMEDIATE ORDER', USA TAKES ACTION

Russian President Vladimir Putin recently issued an urgent order for a second test of the hypersonic Satan-2 nuclear missile by the end of the year.

After Putin's instruction, the United States made an arrangement to increase the nuclear weapons capacities of newly developed warships belonging to its navy.

Known as the RS-28 Sarmat missile, Russia's deadly weapon, which can hit targets on the other side of the world, also has a range that can reach London, the capital of England.

In other words, Russia is reaching the capacity to hit all European capitals with the missile in question within the framework of its deterrent power. According to the US press, the U.S. itself is also within the range of the missile.

IT IS THE BIGGEST FEAR OF THE USA AND THE WEST

The Satan II has been one of the biggest fears of the US and the West since the Ukraine war started.

While the media scrutinizes every detail from the construction of the weapon to its features, governments have been keeping their plans on hold for a long time on how to stop the deadly weapon.

Russia is aware of this fear, so Satan II has been used as a PR tool by the Russian media for a long time.

Russian politician Alexei Zhuravlyov had previously threatened to destroy Britain in a few minutes and

Finland in just ten minutes with his Satan-2 hypersonic missile.

WHAT ARE THE FEATURES OF SATAN 2?

It is stated that Satan 2 is 2000 times more powerful than the atomic bombs that the USA dropped on the Japanese cities of Hiroshima and Nagasaki during the Second World War.

WEIGHT: 210 tons

LENGTH: 34.7 meters

DIAMETER: 3.0 meters

SPEED: 25,750 km / h

HEADS: 15 multiple warheads

RANGE: 17,700 km / h
