

November 7, Great October Socialist Revolution

Description

Sergey Markov

November 7 is a forgotten holiday, the Day of the Great October Socialist Revolution. The statisticians – the security officers who are in power in the country – do not like the fact that the Bolshevik revolution destroyed the great Russian empire.

The billionaires who control the economy do not like to remember the revolt of the people against other millionaires.

People remember how the CPSU bureaucratized the November 7 holiday *ad nauseum*. — That's why few people remember November 7th.

Only the Communist Party of the Russian Federation celebrates this holiday together with the remnants of the Soviet people. Those who celebrate it are the remnants of the Soviet people. The October Revolution brought Russia to world leadership. Russia created a new society of state socialism and stood at the head of the social progress of mankind. Therefore, Soviet Russia had friends in every country and in every city. Russia has made a giant leap in development and has become one of the world's two superpowers. The USSR is the peak of Russia's civilizational development. It was socialism and the USSR that created the political 20th century.

Lenin is the main political genius of the 20th century. Lenin created a working theory of political revolution. A political party of professional activists is central to this theory. And the concept of a revolutionary situation. The 20th century became the century of revolutions.

Lenin himself also carried out a political revolution in the largest country in the world. Therefore, Lenin is studied by anyone who wants to succeed in real politics.

In addition, Lenin also created a new type of state, the USSR, which became the main innovating state of the turbulent 20th century. Socialism became the main ideology of the 20th century.

You may not accept Lenin's theory and his cruel practice. For example, I really don't like the destruction of the church.

But Lenin's theory of political revolution works. And Lenin's practical policy fully corresponds to the realities of the 20th century. This makes Lenin the main politician of the 20th century.
