

## High Jewish IQ Debunked

### Description

Is the Jews' alleged superior IQ a tested, proven fact?

No, rather it's an urban legend constantly repeated without any verification.

Watch the video hereafter.

What's interesting is that the author of this video is willing to accept any result, including that of an average IQ of 110 for Ashkenazim. He explains that **this result was obtained through studies biased by the choice of samples that were not representative of the entire target population.**

Final result:

– ashkenazim: about 94 – 96

– sephardim: 85 – 92

He says: "They are over-represented in the film industry, in the media, in politics, sociology and so on."

Add speculators, so-called philanthropists (in fact, investors) etc.

But is it necessary to have a high IQ to succeed in these fields?

The author provides some clues as to the reasons for this over-representation.

His conclusion is interesting and reasonable: "Is it normal and democratic for any 2% minority in the US to be so disproportionately overrepresented? Is there not a risk of favoritism towards their own kind?"
