

Haiti President Assassinated – Why?

Description

via [Haiti Libre](#) April 7, 2021

Haiti, refused a donation of 756,000 doses of AstraZeneca vaccine proposed by the World Health Organization (WHO) via the Covax mechanism, reported Tuesday April 6, according to the Spanish news agency EFE who quotes a high-ranking source requesting the anonymity within the Haitian Government.

According to this source the Haitian Government refused to receive the AstraZeneca vaccine, manufactured under license by “Serum Institute of India” because of “the global unrest surrounding this vaccine”, considering that the population of Haiti “would not accept it”.

The Haitian authorities have asked the WHO to send vaccines from other laboratories to Haiti, including the vaccine from Johnson & Johnson laboratories which requires only one injection and which can be stored at temperatures between 2 and 8 degrees Celsius. But the World Health Organization is “reluctant” to accept Haiti’s demands, reminding Haitian authorities that **“the deadlines are running out”**.

Note that Haiti is one of the four countries in the world (out of 192 infected with Covid-19) not to have started to vaccinate its population against the coronavirus according to Tedros Adhanom Ghebreyesus, the Director General of WHO.

Note that according to figures from the Ministry of Public Health Haiti would be relatively unaffected by the coronavirus, with a total of 12,803 confirmed cases (as of March 28, 2021 latest data available <https://www.haitilibre.com/en/news-33419-haiti-covid-19-haiti-special-report-382.html>) confirmed cases throughout the national territory since the first case (March 19, 2020 <https://www.haitilibre.com/en/news-30319-haiti-health-origin-of-the-first-2-cases-of-covid-19-in-haiti.html>). However, many experts believe that these data do not reflect the true extent of the pandemic in Haiti due to the limited capacity detection of the virus in the country.
