

Scamdemic Diverse

Description

?Three quarters of Covid-19 infections in Singapore in the last 4 weeks were among vaccinated individuals. The government has vaccinated nearly 75% of its 5.7 million people. Of the 1,096 locally transmitted cases, 44% were fully vaccinated people, while 30% were partially vaccinated. -Reuters 2021-07-23

In Los Angeles, USA, fully vaccinated people made up 20% of covid cases. -Bloomberg 2021-07-23

Jabbed people travelling by air >4 hours may suffer blood clots. -US CDC warning on its website. ~2021-06

Up to 2021-03-13, European Medicines Agency noted 3,964 reports of deaths and 162,610 of injuries in the subjects of injections with the first 3 experimental jabs. -healthimpactnews.com

The Myth of Asymptomatic Spread. The [Wuhan University of Science and Technology](#) carried out screening on nearly 10 million Chinese citizens in Wuhan. Of the 9,865,404 participants without any previous history of COVID-19, a mere 300 were identified as being positive and *asymptomatic*. 1,174 close contacts of the *asymptomatic* positive cases were tracked and traced. None of them tested positive. -ukcolumn.org 2021-07-02

There were a total of 463,457 reports of adverse events from "covid vaccines", including 10,991 deaths and 48,385 serious injuries from 2020-12-14 and 2020-07-09. -US CDC (VAERS) 2021-07-16

US CDC reported that for ~10,000 reports of the fully vaccinated getting infected, 27% were asymptomatic, 61% were mildly ill, 10% were hospitalised and 2% died. It has since stopped accepting reports of such asymptomatic cases. -off-guardian.org 2021-05-26

In Israel, about half of the 46 patients hospitalised in serious condition as of early July were vaccinated. -Reuters 2021-07-23

Notes: This does not cover (a) the falling ages of the victims (b) those victimised by extended contact with the jabbed (c) victims of flu/pneumonia which may be what covid is. The many banned and derided modern and traditional treatments that address the illness in the victims, regardless of what it really is.

Conclusion: Based on the statistics there is no reason to think there's any need to treat an exotic disease with special medicine. Those testing positive with a PCR test and subsequently dying, or those testing positive post mortem, both regardless of actual cause of death, are very frail, elderly people.
